steg.ai

About steg.ai

steg.ai's mission is to protect and authenticate digital media. We do it by writing software that uses AI technology to watermark digital media. Our watermarks are invisible to human vision, but detectable by smartphone cameras.

Founded in 2019, steg.ai is a National Science Foundation (NSF) and investor-funded startup based in Orange County, California. We are looking for a highly motivated senior full stack software engineer with a passion for deploying groundbreaking AI technology to mobile, desktop, and cloud applications.

Job Description

You will work with the design and engineering teams to implement full stack applications for mobile, desktop, and cloud platforms, and create testing frameworks to refine these applications to be fast, reliable, user friendly, and cost effective. You may also be expected to learn and understand the basics of machine learning for working with the machine learning team to deploy new AI technologies on our platforms.

Scope of Responsibility

- Collaborate with the design and engineering teams to implement new front end and back end applications for mobile, desktop, and cloud platforms
- Collaborate with the engineering team to create benchmarking and testing tools that ensure that our software is fast, reliable, user friendly, and cost effective
- Collaborate with the machine learning team to deploy models to our platforms
- Disseminate your work through wiki documentation and presentations

Required Qualifications

- Experience with technologies like JavaScript, HTML, and CSS.
- Experience with JavaScript frameworks like React, Vue, Angular, etc.
- Experience with backend technologies like Python, Rest APIs, SQL, NoSQL, etc.
- Experience with cloud providers like AWS, GCP, Azure, etc.
- Strong collaboration, communication, and organizational skills.

Bonus Qualifications

- Previous experience working with image, video, and audio formats
- Previous experience with web crawling technologies
- Previous experience with iOS or Android platforms.
